FRONT COVER — Lake Power, Utah. Lake Powell is 186 miles long and has 1,960 miles of shoreline, which is longer than the entire west coast of the continental United States. There are 96 major canyons to explore though you'll need a water craft for the majority of them since access is limited because there are few roads. Photographer Dan Heidenreich, CPG-10085, Colorado Springs, Colorado.

American Institute of Professional Geologists (AIPG) is the only national organization that certifies the competence and ethical conduct of geological scientists in all branches of the science. It adheres to the principles of professional responsibility and public service, and is the ombudsman for the geological profession. It was founded in 1963 to promote the profession of geology and to provide certification for geologists to establish a standard of excellence for the profession. Since then, more than 10,000 individuals have demonstrated their commitment to the highest levels of competence and ethical conduct and been certified by AIPG.

The mission of the American Institute of Professional Geologists (AIPG) is to be the superior advocate for geology and geologists, to promote high standards of ethical conduct, and to support geologists in their continuing professional development.
