**FRONT COVER** — Titcomb Basin in the Wind River Range, west-central Wyoming. The wind river range is a range of the Rocky Mountains located in northwestern and northcentral Wyoming. The range covers over 100 miles in a northwest to southeast line and the continental divide runs along the ridge of the Winds. The core of the range is composed primarily of migmatite felsic orthogneiss intruded by quartz diorite and granite plutons. The Winds contain seven of the ten largest glaciers in the lower 48 states. American Institute of Professional Geologists (AIPG) is the only national organization that certifies the competence and ethical conduct of geological scientists in all branches of the science. It adheres to the principles of professional responsibility and public service, and is the ombudsman for the geological profession. It was founded in 1963 to promote the profession of geology and to provide certification for geologists to establish a standard of excellence for the profession. Since then, more than 10,000 individuals have demonstrated their commitment to the highest levels of competence and ethical conduct and been certified by AIPG.

The mission of the American Institute of Professional Geologists (AIPG) is to be the superior advocate for geology and geologists, to promote high standards of ethical conduct, and to support geologists in their continuing professional development.
