**FRONT COVER** — View of the joint separated blocks of the Devonian-age Granite of Cadillac Mountain (foreground) and the 110 ft. high Otter Cliffs (background), one of the highest headlands along the Atlantic Coast, in Acadia National Park, Maine. Composed of the same pinkish to greenish-gray, coarse-grained granite that form the picturesque summits of Mount Desert Island, these rocks originated as igneous plutons that accompanied the mid-Paleozoic Acadian orogeny. Pleistocene glaciation and crustal rebound have dramatically reshaped Acadia NP into a textbook of glacial geomorphology. Photograph by John W. Jengo, CPG-08139.

American Institute of Professional Geologists (AIPG) is the only national organization that certifies the competence and ethical conduct of geological scientists in all branches of the science. It adheres to the principles of professional responsibility and public service, and is the ombudsman for the geological profession. It was founded in 1963 to promote the profession of geology and to provide certification for geologists to establish a standard of excellence for the profession. Since then, more than 10,000 individuals have demonstrated their commitment to the highest levels of competence and ethical conduct and been certified by AIPG.

The mission of the American Institute of Professional Geologists (AIPG) is to be the superior advocate for geology and geologists, to promote high standards of ethical conduct, and to support geologists in their continuing professional development.
