ON THE COVER - Preikestolen, Norway (58-59-17.03 N, 006-12-09.62E). Fractures formed after retreat of the regional ice sheet and rebound of the land surface served to sharpen the splinter of granite whose name translates to Pulpit Rock. Preikestolen gives hikers a breathtaking view of the fjord country of southwestern Norway and Lysefjorden nearly 2000 feet below. Photo by Carla Fisher.
